

Earth Timeline Questions

1. List the name, Ending year and beginning year for each time period and find the number of years for each time period.

Time Period	Ending year	Beginning year

2. This timeline is 1 meter long. If the timeline were full size it would need to be 4.6 meters long because each meter represents 1 billion years. Most of the events are located in less than 60 cm meter of the tape? What does the timeline teach you about Earths history and each of the time periods?

Changing fossil records and major events often mark the end/ beginning of time periods.

3. What event ended the Precambrian and indicated the beginning of the Paleozoic?
4. What event ended the Paleozoic and indicated the beginning of the Mesozoic?
5. What event ended the Mesozoic and indicated the beginning of the Cenozoic?
6. How do you think the Cenozoic may end?
